INDICES OF AGRICULTURAL PRODUCTION IN
EASTERN EUROPE AND THE USSR

1950-68

Europe and Soviet Union Branch
Foreign Regional Analysis Division
Economic Research Service

INTRODUCTORY NOTES

Eastern Europe and the USSR produce and consume a large share of the world's food and fiber. Assessment of the agricultural and food situation in these areas is critical to a knowledge of world production, consumption, and trade in food and fibers. The indices presented in this publication are a part of the continuing effort of the Economic Research Service to assess the world agricultural situation, and were prepared in support of the AID-sponsored project "Analysis of Demand Prospects for Agricultural Products of Less Developed Countries." This is the first time that detailed indices for this part of the world have been published by the U.S. Department of Agriculture, although indices of aggregate output have been published for several years. 1/

The country indices were calculated by Laspeyre's base-weighted aggregative formula. In order to facilitate intra-European comparisons the weights used are estimates of 1957-59 average prices received by farmers in Western Europe, expressed in dollars per metric ton. Regional indices were computed from sums of country aggregates.

Only those agricultural products of considerable significance in the respective countries are included. The year that production data are listed is the year that the bulk of the harvest occurred.

A constant fraction of each country's aggregate value of livestock output has been subtracted to avoid double counting of commodities used as feed, and the livestock products produced from them. This constant fraction is the estimated relationship between the value of livestock products and the value of feed derived from crops calculated in Food Balances for 8 East European Countries, 1959-61, ERS-Foreign 124, Economic Research Service, U.S. Department of Agriculture, May 1965.

Most production data are official statistics of the respective East European countries and the USSR. Where necessary, especially for the USSR, these data have been adjusted to conform with crop and livestock measures of

1/ The Agricultural Situation in Communist Areas: Review of 1968 and Outlook for 1969. U.S. Dept. Agr., ERS-Foreign 259, April 1969. The Europe and Soviet Union Agricultural Situation: Review of 1967 and Outlook for 1968, ERS-Foreign 220, April 1968. The Europe and Soviet Union Agricultural Situation: Review of 1966 and Outlook for 1967, ERS-Foreign 185, May 1967.

output most commonly used. In a few cases, when data were unavailable, estimates were made by ERS specialists. Data for 1968 are preliminary.

Indices of food production were computed from aggregates for edible products contributing energy to the human diet whether actually consumed or not. Per capita indices were computed by dividing the agricultural or food indices by appropriate indices of population (1958 = 100).

The production aggregates showing value in million dollars at constant 1957-59 West European producer prices should not be confused with gross value of agricultural production, gross sales by farmers, or agriculture's contribution to gross material product. The aggregates permit year-to-year comparisons of the level of output in the various countries and the region. Trends in these aggregates should roughly parallel trends in total agricultural production.

The East European countries and the USSR customarily publish indices of the gross value of agricultural production using their own price weights. The feed contribution to livestock output is not deducted. Indices of these countries also usually value the growth in livestock herds rather than final product output. These factors, plus other methodological differences, are the major explanation for the deviation between USDA indices and the indices of these countries.

Comments or suggestions for improving this report are invited.
